

*Ingeny works in partnership with property developers, managing agents, architects, interior designers and home owners to develop advanced home automation and entertainment systems for retrofit and new build developments within the commercial residential marketplace. We create cohesive solutions from design and consultation through to installation and ongoing support.*

- **Integrated home and building automation**
- **Flexible solutions both residents, owners and managers**
- **In-house consultancy, design, installation and service expertise**
- **Unrivalled experience in commercial residential sector**

### **smart building technologies**

Our aim is to make everyday life easier by combining familiar technologies that work seamlessly together for added simplicity, convenience and enjoyment. These integrated solutions give residents complete control at the tap of a touchscreen, smartphone or tablet. Therefore it is possible to monitor and manage virtually any system from a single device including entertainment, communications, environment, energy consumption and security requirements, with the ability to adapt as needs change and technology develops.

### **new build design**

Working closely with developers at the concept and planning stage, Ingeny ensures that home and building controls are part of a fully integrated system embedded in the property infrastructure. Our in-house consultancy expertise covers all aspects of design, specification and project management to ensure you achieve your vision and

maximum value, while minimising installation costs and ensuring high levels of space utilisation. We can also develop automation systems within marketing suites and create accompanying sales collateral based on tiered solutions.

### **modular approach**

Ingeny possesses the ability to create a modular automation solution that covers all core building requirements, and has the flexibility to be tailored and expanded to meet precise needs of residents and property owners. For example, multi dwelling units (MDUs) can be installed with a solution that covers central control systems such as door entry access, CCTV, lighting and energy management, and then pre-wired for individual specifications including multi-room audio, home cinema curtains and blinds control and wireless network solutions.

### **unrivalled expertise**

Ingeny is a division of security systems and building technology integrator Interphone, a company with over 50 years of experience in designing, installing and maintaining electronic control technology in commercial residential properties. This unique background makes Ingeny best-placed to understand the precise home automation needs of property developers, managing agents, architects and interior designers and home owners. Also, as an accredited member of CEDIA, we adhere to the latest industry standards and requirements to ensure the highest levels of quality, service and reliability.
