

CINEMA

*Enjoy the Ingeny cinema experience in the comfort of your home, immersing yourself in multi-speaker surround sound and high resolution picture quality. Whether you want a dedicated home theatre or a hidden cinema system fitted in your living room, we design and install cinema systems that deliver the optimum audio and visual performance, while creating a comfortable and engaging environment.*

- High performance Digital Cinema Experience
- High Definition Video and Audio
- Bespoke design to optimise performance
- Access to a world of entertainment either downloaded directly, or via streaming services
- Scene setting for a true theatre environment
- Unified control system

### quality cinema

Ingeny develops custom-designed home Cinema rooms for the best possible experience. We offer tailored solutions, using the latest audio visual technologies, to deliver unrivalled picture and sound quality. In fact, every Ingeny cinema is developed from the ground up by our in-house design team using AutoCAD and 3D modelling to guarantee the performance and appearance that you desire. Also, as an accredited member of CEDIA, we adhere to the latest industry standards and requirements to ensure the highest levels of quality, service and reliability.

### unrivalled choice

Ingeny has created a range of cinema packages – bronze, silver, gold and platinum – to meet your precise requirements and fit within your budget. They are based on our experience of proven cinema systems that have been configured to provide the highest levels of quality in terms of sound and vision. They address both flat screen-and projector-based specifications, including automated functionality where required, with multi-channel surround sound.

### integrated home entertainment

Ingeny can bring together and distribute multiple local and online sources such as media servers, Netflix, Sky HD, Spotify, Napster, PlayStation Plus, Xbox Live and other on demand services, so television, films, music and games can be enjoyed from any room in the home. Furthermore, with single-or multi-room home automation and system control, you can pre-define your preferred cinema settings for lighting, motorised blinds and curtains, and temperature.
