

CUSTOM

*Ingeny Custom is a high-end home automation and entertainment solution for bespoke and luxury residential properties. We are able to provide a highly personal service, from design through to installation and aftercare, for all refurbishment and new build projects to integrate technologies that complement your lifestyle as well as your home.*

- Bespoke end-to-end service
- Full design services using AutoCAD and 3D modelling software
- Personalised interface control
- Installation and aftercare service

### customised home automation

Our systems are designed to make life easier by bringing together familiar technology in perfect harmony. This integration can be individually-tailored to take into consideration personal taste and meet exact entertainment, communications, comfort and security preferences. Not only does this provide complete control at the tap of a touchscreen, smartphone or tablet, but also ensures complementary systems work seamlessly together to bring added simplicity, convenience and enjoyment to everyday life.

- Hi-Fi and multi-room audio
- Cinema and HD TV distribution
- Data networking and communications
- Lighting and heating control
- CCTV and security

Whether your preferred design and colour scheme, we can personalise every aspect of your automation solution.

### consultancy approach

We engage with you, along with your architect and interior designer, at the concept and planning stage to ensure that your home automation and entertainment solution is part of a fully integrated system embedded in the building infrastructure. Our consultancy expertise covers all aspects of design, specification and project management, using detailed CAD drawings and 3D modelling to ensure we bring your vision to life. We will then work closely with your joiners, craftsman and suppliers to achieve the highest levels of quality and customisation. Also, as an accredited member of CEDIA, we adhere to the latest industry standards and requirements to ensure the highest levels of quality, service and reliability.

### live demonstration

Our home automation demo suite, located at our Harrow headquarters, shows how the technology and control solutions come together in a truly seamless way. We have combined all aspects of home and smart building automation within an integrated facility that showcases energy management, security, lighting and audio visual technologies. This means you can explore products and control systems to better understand your choices.
