

Ingeny's home automation and smart building solutions are designed to make life easier by bringing together familiar technology systems in perfect harmony. We work closely with our clients to understand their vision, expectations and personal tastes, so we can design individually-tailored solutions that meet their precise entertainment, communications, comfort and security preferences.

Ingeny can deliver high quality design solutions for retrofit and new build developments covering all types of residential properties from individual homes to single conversions and large multi-block sites.

- Consultative design approach
- Accurate and scaled drawings
- Documented cable structure
- Efficient project management and delivery
- Complete financial breakdown

We provide a fully documented system design including scope of works, specifications, schematic plan, elevations and 3D visualisations using AutoCAD and Sketchup. In addition, complete electrical design schemes enable contractors to have a detailed understanding of a project's technical requirements, with documented cable structure, and access the necessary information to accurately cost the required works as part of the tender process.

The integrated home automation systems we design enable our clients to easily understand system performance, manage budgets and possess the adaptability and flexibility to adopt future technology innovations.

design and creativity

Our in-house team creates a comprehensive design scheme in consultation with property developers, architects, interior designers and home owners. This collaborative approach ensures accurate and scaled drawings, fully compatible with architectural CAD, which will help achieve unrivalled project delivery and results in line with exact requirements.

proven expertise

Ingeny is a division of security systems and building automation integrator Interphone, a company with over 50 years of experience in designing, installing and maintaining electronic control technology in residential properties. This unique background makes Ingeny best-placed to understand the precise home automation needs of clients, enabling it to create complete and joined-up solutions using longstanding and proven design and consultation expertise.
